### **Non-GAAP Financial Measure and Definition**

We utilize certain financial measures that are not prepared or calculated in accordance with GAAP to assess our financial performance and profitability. The non-GAAP financial measure used in this release is Adjusted EBITDA.

We define Adjusted EBITDA as net income (loss) before any non-operating expenses, including depreciation and amortization, stock-based compensation expense, gain or loss on sale of assets or stations (if any), gain or loss on derivative instruments (if any), impairment of assets (if any), acquisition-related and restructuring costs (if any) and franchise and state taxes.

Adjusted EBITDA is the financial metric utilized by management to analyze the cash flow generated by our business. This measure isolates the amount of income generated by our core operations after the incurrence of corporate, general and administrative expenses. Management also uses this measure to determine the contribution of our core operations, including the corporate resources employed to manage the operations, to the funding of our other operating expenses and to the funding of debt service and acquisitions. In addition, Adjusted EBITDA is a key metric for purposes of calculating and determining our compliance with certain covenants contained in our credit facility.

In deriving this measure, management excludes depreciation, amortization, and stock-based compensation expense, as these do not represent cash payments for activities directly related to our core operations. Management excludes any gain or loss on the exchange or sale of any assets or stations as it does not represent a cash transaction. Management also excludes any gain or loss on derivative instruments as it does not represent a cash transaction nor are they associated with core operations. Expenses relating to acquisitions and restructuring costs are also excluded from the calculation of Adjusted EBITDA as they are not directly related to our core operations. Management excludes any impairment of assets as they do not require a cash outlay.

Management believes that Adjusted EBITDA, although not a measure that is calculated in accordance with GAAP, nevertheless is commonly employed by the investment community as a measure for determining the market value of media companies. Management has also observed that Adjusted EBITDA is routinely employed to evaluate and negotiate the potential purchase price for media companies and is a key metric for purposes of calculating and determining compliance with certain covenants in our credit facility. Given the relevance to our overall value, management believes that investors consider the metric to be extremely useful.

Adjusted EBITDA should not be considered in isolation or as a substitute for net income, operating income, cash flows from operating activities or any other measure for determining the Company's operating performance or liquidity that is calculated in accordance with GAAP.
